Sancti-Spíritus, Salamanca
West Spain

MolinoLab is a creation and experimentation space where art, culture, and technology meet. We design and prototype hardware and interactive experiences, often combining digital fabrication with open tools artists can actually use in the studio or in the field.

We develop and share devices such as Biodata interfaces so performers, educators, and curious makers can listen to subtle electrical signals from plants and explore sonification, installations, and networked projects.

SINFONÍA BIÓTICA

sinfoniabiotica.xyz

BIODATA QUICK START

1. Connect

Attach the electrodes to two leaves, stem or a leaf and ground.
Power the board and wait until it is ready.

2. Hear it

The device turns biological activity into MIDI notes. Pair Bluetooth MIDI with a phone, tablet, or computer (default is often ON), or use USB MIDI.

3. Adjust settings (button + knob)

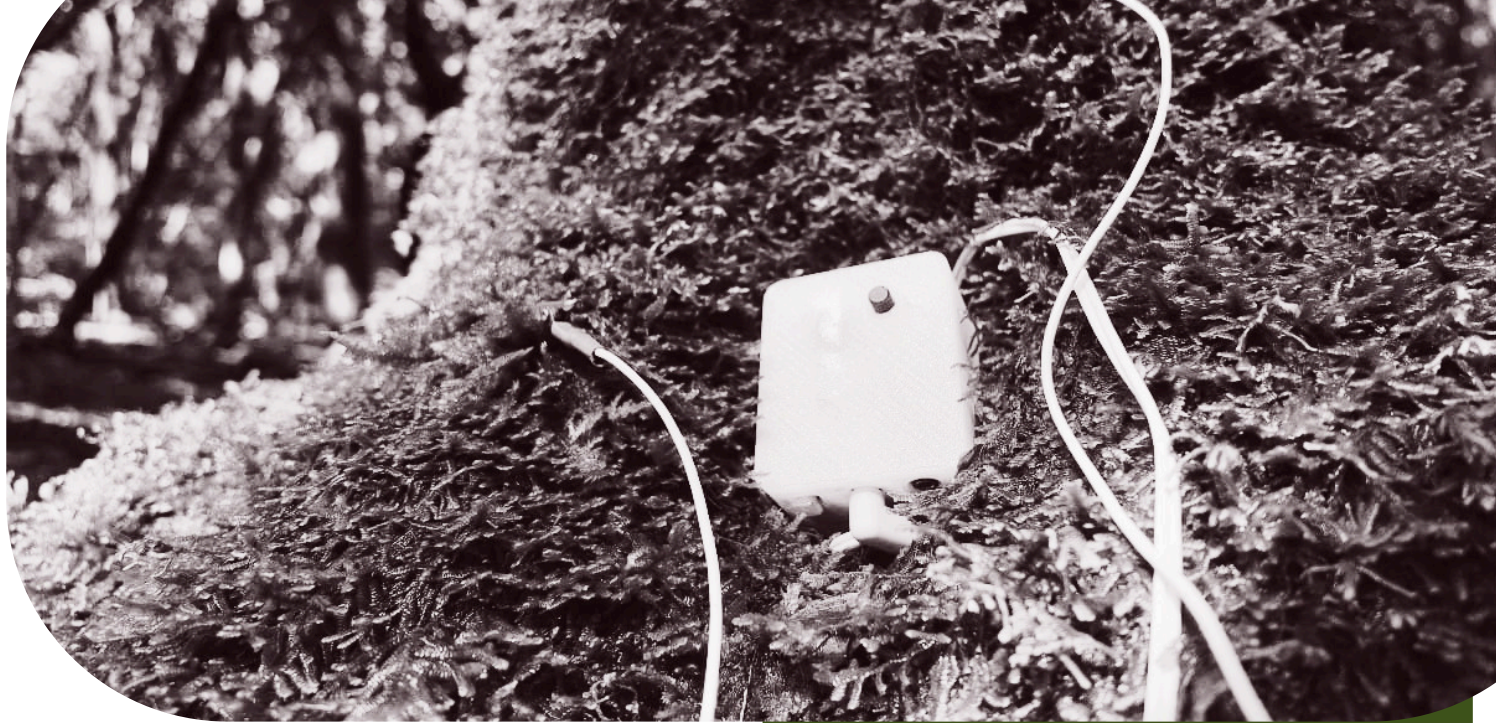

Use the knob to change the threshold, left to increase sensitivity right to reduce it.
You can use the button and knob to navigate through the menu for advanced options, scales, etc.

Settings are remembered on power-up.

Factory reset: hold the button while powering on; after the startup LED sequence, white indicates defaults restored

(typical defaults include chromatic scaling, channel 1, Bluetooth ON, Wi-Fi OFF).

More info & tutorials at sinfoniabiotica.xyz

BIODATA MENU QUICK GUIDE

Red — note scaling
(chromatic, minor, major, Indian, etc.)

Orange — MIDI channel (1–16)

Green — Wi-Fi on/off

Blue — Bluetooth on/off

ABOUT SINFONÍA BIÓTICA

Sinfonia Biotica is an immersive experience where people and plants shape sound and visuals together—plant signals feed the piece live or from recordings. VR worlds centered on notable trees mix audience and performer. MolinoLab's Biodata gear captures those signals and, in newer setups, streams data toward a wider platform for creators and educators.
